BELVOIR STEP 1 TACK CLEANER MITT

KEY FEATURES

No Water

No Mess

100%
Biodegradable

Use Both Sides
and
Inside Out

Ideal For Last
Minute
Touch Ups

Are these like the Step 1 Belvoir Tack Cleaning Spray?

Yes, we've taken our tried and trusted, much loved classic Belvoir Cleaning Formula, and applied it to an easy-to-use Mitt.

Why does it smell different?

There is no difference, the stronger smell is a result of the formula being more exposed on the mitt.

Are these the same as the Tack Cleaning Wipes?

Our mitts are the next best thing. Each Mitt is designed so you can use like a glove resulting in the ultimate easy and effective tack cleaning experience. There is nothing else like it.

What are the benefits of using a Mitt vs a sponge?

Belvoir Tack Cleaner Mitts are a game changer for many reasons:

- Clean both sides of leather in one easy wipe for faster yet effective tack cleaning
- Makes cleaning those hard-to-reach areas and intricate bits of tack much easier
- Experience a deeper clean with a fresh wipe each time versus a sponge which inevitably redistributes dirt and grease.

Do you need to use water?

The mitt is ready to go - there is no need for water, making for mess free, quick tack cleaning.

How long will each Mitt last?

Our Care Team super testers have reported incredible cleaning time with each mitt. For example, one mitt will clean a dirty bridle including, flash, martingale and breast plate and full saddle needing a lot of cleaning love. Depending on how much cleaning the tack needed, the Mitt was able to wipe down Boots too!

How big is each Mitt?

They are a very generous size, we recommend you can continue to move the Mitt around your hand to ensure you use every bit for optimum cleaning duration.

Is this easy to turn over?

Yes absolutely, we've even included a handy turning tab to make it even easier

What if I only need the mitt for a quick wipe down?

That's what the Mitts are brilliant for, and you simply fold and repack your Mitt. We recommend you open the seal with care to ensure proper reseal each time but also use the handy reseal tab included, see the back of the packaging. This ensures any repacked mitts and the rest of your pack stays in optimum condition.

Are the Mitts durable?

Yes the Mitts are super strong. The Belvoir cleaning formula will effectively lift grease & dirt from your tack with a simple wipe but don't be afraid to use the Mitt to rub problem areas. Be careful that excess sand and dirt are gently wiped away first.

Will the Mitt last long outside of the packaging?

The mitt is ready to go - there is no need for water, making for mess free, quick tack cleaning.

Can they be used inside out?

Yes, another great thing about the Mitt, especially with very dirty tack, you can turn inside out for extra cleaning time.

What leather are they suitable for?

- Can be used on synthetic leather
- Not suitable for aniline, untreated leather, suede or nubuck
- Always test on a hidden area before use

Can you re-use the Mitt even when formula runs dry?

Yes, because the mitt is durable and long lasting, you can keep using the mitt by topping up with your Belvoir Tack Cleaning Step 1 Spray .

How can I get more out of each mitt?

You can rinse and reuse

Can you use with Step 2 spray?

Yes, they are the mitt that keeps on giving. Once your tack is clean, you can use the mitt to condition your tack by applying your Step 2 Conditioning spray to the Mitt.

Are they safe to use for sensitive skin?

Yes they are hypoallergenic but our care team suggests using a plastic glove if you have any skin concerns.

Due the generous amount of formula in the Mitt, it can feel chilly at first so a plastic glove will also help alleviate any coldness, especially on winter mornings (we've all been there)

Are they environmentally friendly?

Yes, our Mitts are 100% biodegradable and can be disposed of in domestic or industrial compost.

Recycling Information: Separate label from flowpack, and then dispose of flowpack in domest Recycling Bin. Labels can be recycled but require specialist recycling facilities.

What is the best way to store the Mitts?

Our Mitts are easy to transport, making them the perfect competition turnout essential at competition. To keep them in tip top shape, store in original flow pack in cool, dry conditions away from direct sunlight between 5C and 25C.
